

What is JDAP?

Source: The Jamaica Development Application Portal Website

The Jamaica Development Application Portal (JDAP) is an online platform that enables applicants to submit development applications. Registered users can make secure payments online, update information, upload attachments and see their application status, reports and comments. Local authorities (municipal corporations) and relevant agencies use the portal to review, comment on and approve development applications.

The information in the JDAP database can be accessed by registered users. The public is also invited as public users, to access the Public Search feature to keep informed on development and report breaches observed.

For more information please visit the JDAP website at: <https://www.idap.gov.jm/>
